NANO — the agent that runs JARVIS day to day

JARVIS vault: every dot is a note, colour is its area

Interactive card: JARVIS live — agents, products, numbers

> Came to management from computational mathematics; enjoys work where analysis turns into a decision and then into a tool people actually use. This summer, in the supply chain team of a consumer-electronics maker, built two such tools: **a register sync that cut hours of daily reconciliation to minutes** and a model that shows when each assembly line will run short of parts. Founder of **a student club on AI in management**; directs **JARVIS, a proprietary team of 17 AI agents and a dispatcher** behind three products in use.

EXPERIENCE

Supply Chain Intern — Process Automation · SberDevices (Sber Group) — Jul — Aug 2026
Consumer-electronics manufacturer · Supply Chain department

- Built a tool that syncs carriers' shipment exports into the master container register: **a daily manual reconciliation of several hours now takes minutes**, and it flags mismatches manual checks had missed
- Modelled production-line continuity: a formula-driven Excel/VBA plan that shows **the day each assembly line runs out of components** from warehouse stock and inbound shipments, and recalculates itself when a delivery date moves
- Automated invoice processing: a **Python parser** that turns supplier invoices from the Diadoc e-document system into an **Excel workbook with line items and a per-supplier summary**
- Entered **supply chain, foreign trade and customs from zero**; clarified requirements directly with colleagues and fixed agreements in writing. **The tools stayed in use after the internship** and are run by non-technical staff

Supply Manager · Istudio.ru — family business (informal) — Oct 2022 — Jul 2025
Russian online retailer

- Sourced packaging, consumer electronics and apparel: **found and shortlisted factories**, compared offers on **unit price, quality and lead time**
- **Negotiated prices and terms** with Chinese suppliers

Mathematics Tutor · Private tutoring — 2026 — present
University-level higher mathematics · one-on-one

- Teach university students higher mathematics one-on-one: diagnose where understanding breaks, build an **individual study plan** around it and track progress from session to session

PROJECTS

JARVIS — proprietary AI agent team and knowledge base — Apr 2026 — present
Own IP · licensed, not sold · Python · Claude Code · LLM APIs

17 + 1	2,387	1,297	1,218
AI agents + dispatcher	notes · 23,892 links	commits since 10 May 2026	automated tests

- Run 17 specialised AI agents and a dispatcher the way a manager runs a small department: each has a role and a written mandate, a reviewer agent checks the work, and **only I sign off anything that is hard to undo.** 1,297 commits since 10 May 2026
- Used as a **black box**: a task goes in, a finished result comes out, and **nothing irreversible happens without a person's Approve**. The system is my own IP — **licensed, not sold** — so its internals stay closed
- Shipped a **line of three products** on one platform for different users: the lecturer assistant below, a **daily AI workspace for a company CEO** (B2B) and a Telegram day planner; the B2B product went from demo to **an offer of a paid three-week pilot**, now under review. **1,218 automated tests** across them
- Measured retrieval at scale: in a benchmark at **50,000 notes** (3 seeds) the graph route reads **21.8× fewer tokens** than a flat scan and does not get dearer as the vault grows

JARVIS Teacher — AI assistant for university lecturers Oct 2026 — present

Finished product of the AIM-REC club · live at teacher.nineloom.com · built by a team of AI agents under my direction

- Chose the production model by an **A/B test on a real lecture deck**: the cheaper model took 290 s, dropped half the content and swapped Chinese law for Russian. Switched to Claude and made the product edit the lecturer's own .pptx in place: **290 s → 36 s, 3.4× fewer tokens**, original layout kept
- Shipped it to a VPS: HTTPS, firewall, encrypted backups with a tested restore; **200+ automated tests**; open to lecturers now

AIM-REC student club — Founder and Leader Apr 2026 — present

AI in Management — Research and Education · Shenzhen MSU-BIT University

- **Founded the club** and won the **endorsement of the Faculty of Management**
- Designed and taught an **AI-literacy course** open to students of **all faculties**, with my own materials and practical assignments

Graph research — formal model of a personal knowledge graph 2026 — present

Independent research · paper in preparation

- Formalised a second brain as a multicolour graph and context retrieval for an LLM as **budgeted connected submodular maximisation**
- Measured how well human-assigned topics match the graph's own communities: modularity ratio **ρ = 0.774 ± 0.005 over 50 seeds**, against degree-preserving null models ($z \approx 80$); reported where the number does not mean what it seems to (NMI 0.53)

EDUCATION

M.Sc. in Management · Shenzhen MSU-BIT University Sep 2025 — Jul 2027 (expected)

Joint university of Lomonosov Moscow State University and Beijing Institute of Technology · Shenzhen, China

- **GPA 3.95 / 4.0** · all exams “Excellent” except one “Good”
- Thesis (in progress): “Fairness and Performance in Human–AI Agent Teams”

B.Sc. in Computational Mathematics · Lomonosov Moscow State University · Shenzhen MSU-BIT University Sep 2019 — Jul 2025

Double degree · Faculty of Computational Mathematics and Cybernetics (VMK)

- Thesis: constrained routing in graphs — complexity of the minimum-protected-vertex path problem and algorithms for secure communication channels

AWARDS

- **Guangdong Provincial Government Scholarship** for international students — awarded in 2025 and 2026
- **GPA 3.95 / 4.0** · **IELTS 7.5** · **HSK 4: 264 / 300**
- **Grand Prix, “Lomonosov 2026” conference**, section “Digital Transformation of Management Models and Tools” (Lomonosov MSU and Shenzhen MSU-BIT University)

LANGUAGES

- **Russian** — native
- **English** — IELTS 7.5 (C1); master's taught in English
- **Chinese** — HSK 4 — 264/300; HSK 5 planned Dec 2026

SKILLS

- Managing AI agents: roles, review, sign-off
- Python automation · pytest · A/B tests
- Excel: formulas, VBA · data modelling
- Process analysis and automation
- Supplier sourcing and negotiation
- Teaching and presenting (RU · EN · ZH)
